About Sanmargar Team

Sanmargar Team has been specialising in Business Intelligence solutions and products since 2005. Our solutions support customers, sales and finances management processes in corporations from the financial, energy, excavation and general services sectors. Sanmargar Team delivers solutions designated for Reference Data Management – Metastudio DRM, deduplication and cleansing of address data – Sanmargar DQS (Data Quality Studio), supporting centralisation of customer data – Sanmargar CKK and various products supporting data processing and integration.

About Metastudio DRM

Metastudio DRM is a solution developed by Sanmargar Team to support management of reference data such as code or value dictionaries, organisational structures, dimension hierarchies, rules and parameters of data processing processes. Metastudio DRM enables assumption of responsibility for management of those elements by business analysts in IT, sales and controlling areas.

Metastudio DRM is a specialised editor of reference data, operating independently from technology of the database storing the reference data. It allows management of hierarchies (e.g. organisational structures, object hierarchies, charts of accounts), analytic dimensions (e.g. customer segmentations, product classifications, sales channels, cost object codes), data conversion (mapping) rules, data validation and control rules, processes steering parameters.

Metastudio DRM offers mechanism and data editing rules characteristic for Reference Data Management area, e.g. support for validity periods in various models, versioning, value domains, establishing relations between dictionaries, various types of hierarchies.

About this Live Demo

This demo is provided with no warranty strictly for demonstration purposes only on terms and conditions defined in *Terms of use* document attached to this software. If you not agree to attached *Terms of use*, you cannot use this Live Demo. By using this Live Demo, you agree to attached *Terms of use*.

What is it for

Metastudio DRM Live Demo is provided for demonstration, evaluation and testing purposes. It contains Metastudio DRM web solution with its documentation and some demonstration content. It is addressed and available to any Organisation, which is interested in obtaining Reference Data Management solution for its own use.

How does it work

Metastudio DRM Live Demo may be provided and available as hosted web application or installed on Organisation's own infrastructure. Regardless of the method of installation, as long as there is no

commercial contract for Metastudio DRM signed between Sanmargar Team and the Organisation, this solution has to be considered as demonstration edition only and used on terms and conditions included in the attached *Terms of use* document.

Any user from the Organisation which is interested in obtaining Reference Data Management solution for its own use, may register on shared Sanmargar Team environment and get access to their own instance of Metastudio DRM application for limited period of time. Registration site is available on <http://ms3-demo.sanmargar.com:8080/msdemo/>.

While their Metastudio DRM test drive, user may manage both content and basic configuration of application through provided Metastudio DRM web interface. Changing web server properties and parameters, decompiling of application, as well as copying any included software, data or materials, is strictly prohibited.

In case of need for test drive period extension, application instance reset, or any other issue, please contact Sanmargar Team at metastudio.drm@sanmargar.com.

What is included

Metastudio DRM Live Demo includes:

- Ready-for-use Reference Data Management solution
- Standard product documentation
 - Product Presentation
 - Product White Paper
 - User Guide
 - Admin Guide
 - Installation Guide
- Additional documentation
 - This document (Metastudio DRM About Live Demo)
 - Terms of use document
- Three demonstration areas
 - Reference Data Repository Demo
 - This demo consists of classical Reference Data Management objects and data to provide more general view of Metastudio DRM functionality. It is recommended to start test drive here.
 - Financial Mapping Demo
 - This demo presents more sophisticated use of Metastudio DRM in financial data processing to provide business interface for value mapping.
 - Sandbox
 - This demo is designed for more advanced exercises in creating own Reference Data dictionaries from scratch.

Every demonstration areas has been provided with its own *Demo Guide* document, which is recommended to be read first.
